

# **LAPTOP REQUEST CATALOG ITEM**

## Project Overview:

At ABC Corporation, employees frequently require laptops to perform their work effectively. However, the current laptop request process is manual, time-consuming, and prone to errors, often resulting in delays and incomplete data collection. This creates inefficiencies for both employees and IT support teams.

This project introduces a **Laptop Request Catalog Item** within ServiceNow to streamline and automate the laptop request process. By incorporating dynamic fields, clear instructions, and form reset functionality, the catalog item ensures that users have a guided, error-free, and efficient request experience. Additionally, all changes and configurations will be tracked to support governance and deployment best practices.

By implementing this solution, ABC Corporation aims to:

- Eliminate delays caused by manual handling of laptop requests
- Ensure accurate data collection through dynamic form behavior
- Enhance employee satisfaction with a modern and user-friendly request interface
- Improve IT efficiency by standardizing and automating request fulfillment
- Strengthen governance through proper tracking of changes and deployments

Ultimately, this initiative supports the organization's goal of improving service delivery and providing employees with the right tools quickly and efficiently, enabling them to stay productive and focused on their work.

## 1. Introduction

In today's digital workplace, employees rely heavily on having the right devices to perform their tasks efficiently. At ABC Corporation, the process of requesting laptops is currently manual, time-consuming, and prone to delays or incomplete submissions. This not only affects employee productivity but also places additional strain on IT support teams responsible for handling requests.

To address these challenges, this project focuses on implementing a **Laptop Request Catalog Item** within ServiceNow. By leveraging dynamic form behavior, clear instructions, and workflow automation, the catalog item will provide employees with a guided and user-friendly interface to submit laptop requests. This ensures that accurate information is captured from the start, reducing errors, improving processing speed, and delivering a more seamless request experience.

## 2. Project Objective

The primary objective of this project is to implement a **Laptop Request Catalog Item** within ServiceNow that simplifies and accelerates the process of requesting laptops at ABC Corporation. The solution is designed to:

- Automate and standardize the laptop request process to eliminate manual errors and delays.
- Provide dynamic form behavior to guide users and ensure accurate data collection.
- Enhance the user experience with clear instructions, intuitive design, and form reset functionality.
- Improve IT efficiency by streamlining request handling and fulfillment workflows.
- Strengthen governance and compliance through proper tracking of changes and deployment.

By achieving these objectives, the project aims to deliver a modern, efficient, and employee-centric request process that supports both productivity and service excellence across the organization.

## 3. Key Features

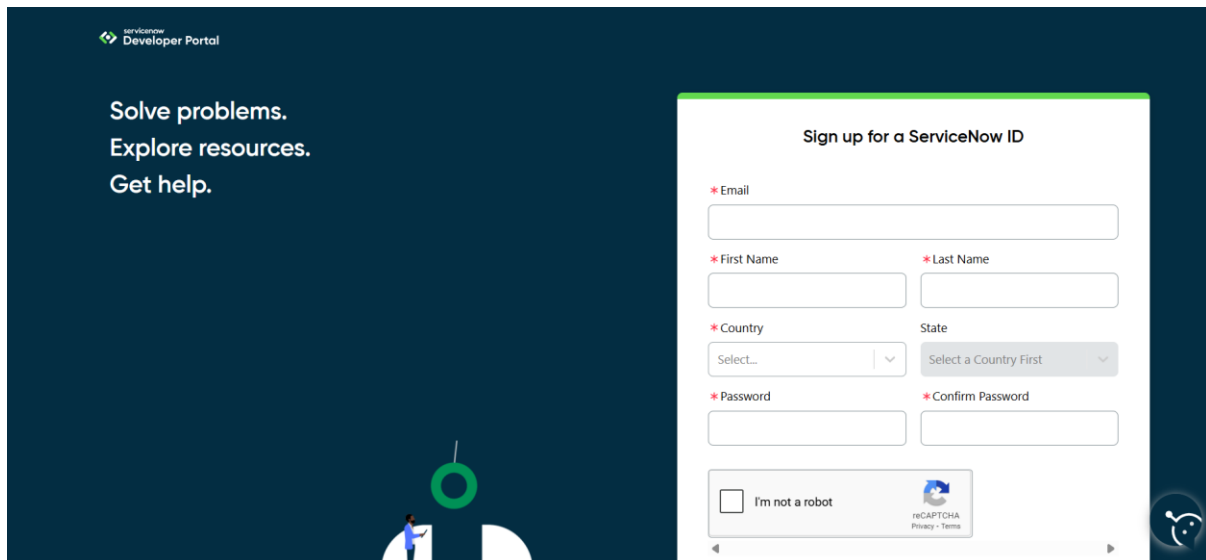

- **Dynamic Form Behavior** – Fields adapt based on user selections (e.g., laptop type, usage needs, or department).
- **Clear Instructions** – Built-in guidance to help users complete requests accurately.
- **Form Reset Functionality** – Allows users to quickly reset and re-enter information if needed.
- **Automated Workflow** – Requests are routed automatically to the IT team for review and fulfillment.

- **Notifications** – Real-time updates to users and IT teams on request submission, approval, and fulfillment status.
- **Governance & Tracking** – All changes, approvals, and deployments are logged for transparency and compliance.
- **Reporting & Analytics** – Provides insights into request volumes, processing times, and fulfillment efficiency.

## 4. ServiceNow Developer Setup:

### Create a Developer Account

1. Go to ServiceNow Developer Portal(<https://developer.servicenow.com/dev.do>).
- Sign up for a free developer account and fill the following details.

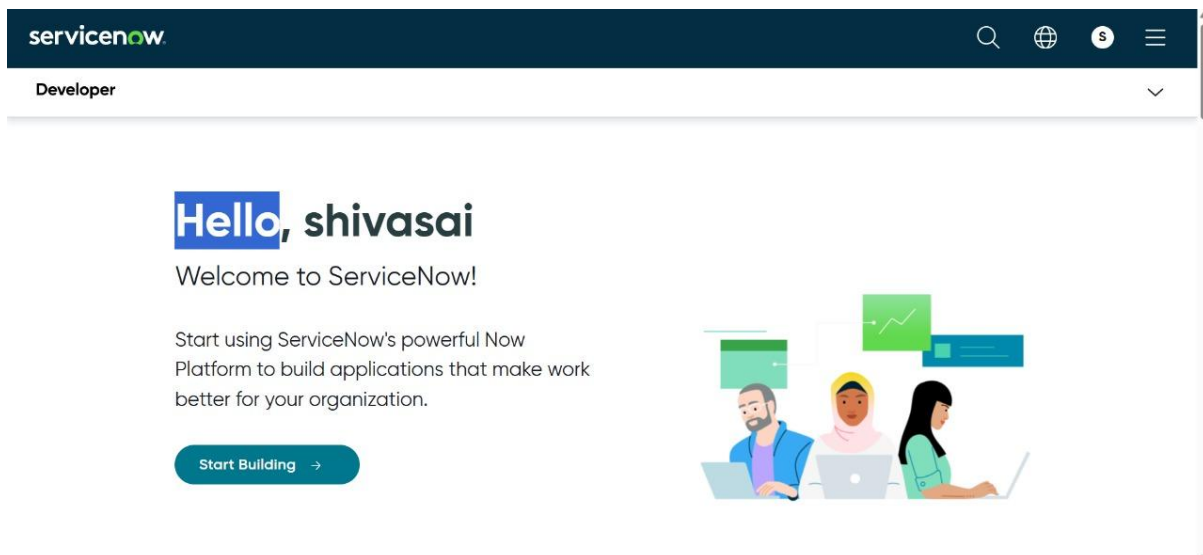

The screenshot shows the ServiceNow Developer Portal sign-up page. On the left, there is a dark blue background with the text "Solve problems. Explore resources. Get help." and a small illustration of a person. On the right, there is a white sign-up form titled "Sign up for a ServiceNow ID". The form includes the following fields:

- \* Email (text input)
- \* First Name (text input)
- \* Last Name (text input)
- \* Country (dropdown menu with "Select..." and a downward arrow)
- State (dropdown menu with "Select a Country First" and a downward arrow)
- \* Password (text input)
- \* Confirm Password (text input)
- \* I'm not a robot (checkbox)
- reCAPTCHA (with "Privacy" and "Terms" links)

After signing up you will get an verification mail to you provided email id. After the verification your ServiceNow Developer Portal Home Page will appear

Now click on start building it will take you to the section where you can **request a Personal Developer Instance (PDI)** or start using **App Engine Studio** and other tools.

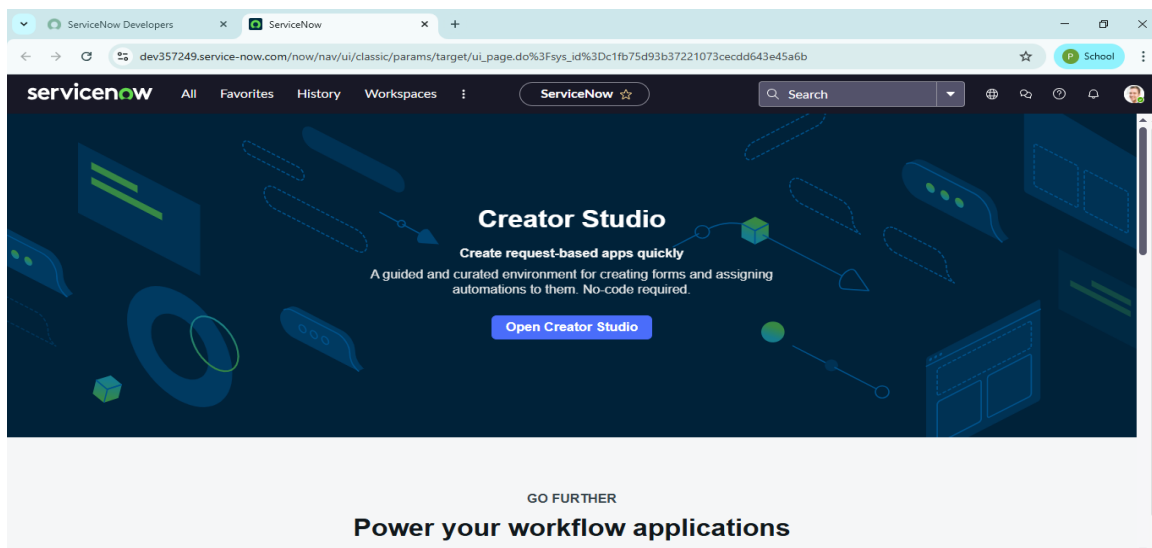

**Profile Icon (Top Right Corner)** → Manage your account, request instances, and check your developer profile.

## 5. Project Implementation in ServiceNow:

After the instance building is completed the page will be directed to your creator studio.

Creator Studio in ServiceNow provides a **guided, no-code environment** to build applications quickly. It is especially useful for creating **request-based applications** by defining forms, setting up tables, and automating workflows.

### a. Creation of Local Update set

Steps to create local update set in ServiceNow:

1. Open service now.
2. Click on All → search for update sets

3. Select local update sets under system update sets
4. Click on new
5. Fill the following details to create a update set as: "Laptop Request"
6. Click on submit and make current
7. By clicking on the button it activates the update set .

The screenshot shows the ServiceNow interface for creating an update set. The main form is titled "Update Set - Laptop Request 3". The fields are as follows:

Field	Value
Name	Laptop Request 3
State	In progress
Application	Global
Created	2025-09-17 05:42:38
Created by	admin
Release date	
Install date	
Installed from	
Description	

At the bottom of the form, there are buttons for "Update" and "Back Out". Below the form, there are "Related Links" including "Export to XML", "Merge With Another Update Set", and "Scan Update Set". The bottom of the page shows a table with "Customer Updates (10)", "Update Set Logs", and "Child Update Sets".

## b. Service Catalog Item

### b.1. Create Service Catalog Item:

Steps to create Service Catalog item in ServiceNow:

1. Open service now.
2. Click on All → service catalog
3. Select maintain items under catalog definitions
4. Click on New.
5. Fill the following details to create a new catalog item
  - Name: Laptop Request
  - Catalog: service Catalog
  - Category: Hardware
  - Short Description: Use this item to request a new laptop
6. Click on 'SAVE'

The screenshot shows the ServiceNow interface for editing a Catalog Item named 'Laptop Request 3'. The left sidebar contains a navigation menu with options like 'Service Catalog', 'Catalog Definitions', 'Maintain Catalogs', 'Maintain Categories', 'Maintain Dynamic Categories', 'Maintain Items', 'Maintain Cart Layouts', 'Service Catalog Wizards', and 'Maintain Wizards'. The main form area includes a header with 'Catalog Item - Laptop Request 3' and a search bar. Below the header, there's a blue box with instructions: 'Catalog items are goods or services available to order from the service catalog. Items can be anything from hardware, like tablets and phones, to software applications, to furniture and office supplies. Enter a Name and Short description to display for the item. Enter a Price, approvals, variables, and other information as needed.' The form fields include: Name (Laptop Request 3), Application (Global), Active (checked), Fulfillment automation level (Unspecified), Category (Hardware), State (-- None --), Checked out (-- None --), and Owner (System Administrator). At the bottom, there are tabs for 'Item Details', 'Process Engine', 'Picture', 'Pricing', and 'Portal Settings'. The 'Item Details' tab is active, showing a 'Short description' field with the text 'Use this item to request a new laptop' and a 'Description' field with expand/collapse buttons.

## 3.2.Add variables:

Steps to add variables:

### Step1:

- After saving the catalog item form scroll down and click on variable(related list)
- Click on new and enter the details as below
  1. Variable 1:Laptop Model
    - Type: Single line text
    - Name: laptop\_model
    - Order:100
- Click on submit
- Again click on new and add Remaining variables in the above process

The screenshot shows the ServiceNow interface for adding a new Variable named 'Laptop Model'. The left sidebar is the same as the previous screenshot. The main form area has a header with 'Variable - Laptop Model' and a search bar. Below the header, there's a blue box with instructions: 'Specify the Question that explains the options available to the end user when ordering the item'. The form fields include: Application (Global), Type (Single Line Text), Catalog item (Laptop Request 3), Order (100), Active (checked), Mandatory (unchecked), Read only (unchecked), and Hidden (unchecked). At the bottom, there are tabs for 'Question', 'Annotation', 'Type Specifications', 'Default Value', 'Auto-populate', 'Permission', and 'Availability'. The 'Question' tab is active, showing a 'Question' field with the text 'Laptop Model', a 'Name' field with the text 'laptop\_model', and fields for 'Conversational label', 'Tooltip', and 'Example Text'.

2. Variable 2:Justification  
Type: Multi line text  
Name: justification  
Order:200
3. Variable 3:Additional Accessories  
Type: Checkbox  
Name: additional\_accessories  
Order:300
4. Variable 4: Accessories Details  
Type: Multi line text  
Name:accessories\_details  
Order:400

## Step2:

- After adding above variable which are added to newly created catalog item
- Then save the catalog item form

Type	Question	Order	Name	Read only	Created
Single Line Text	Laptop Model	100	laptop_model	false	2025-09-17 05:46:09
Multi Line Text	Justification	200	justification	false	2025-09-17 05:47:03
CheckBox	Additional Accessories	300	additional_accessories	false	2025-09-17 05:47:45
Multi Line Text	Accessories Details	400	accessories_details	false	2025-09-17 05:48:40

## c. Create Catalog Ui policies

Steps to create catalog Ui Policies:

- 1.Click on all→ search for service catalog
- 2.Select maintain item under catalog definition
- 3.Search for ‘laptop request’ which is created before
- 4.Select ‘laptop request’ and scroll down click on “Catalog Ui policies”
- 5.In the catalog ui policies related list tab click on new
- 6.Give short description as: show accessories details
- 7.Set the Catalog Condition in the related list tab ‘when to apply’  
[field: additional\_accessories, operator: is, value: true]

The screenshot shows the 'Catalog UI Policy - Show Accessories Details' configuration page in ServiceNow. The page includes a header with the ServiceNow logo and navigation tabs. The main content area has a blue informational box at the top explaining that catalog UI policies dynamically change variables. Below this, there are fields for 'Applies to' (set to 'A Catalog Item'), 'Application' (set to 'Global'), 'Catalog item' (set to 'Laptop Request 3'), and 'Short description' (set to 'Show Accessories Details'). The 'Active' checkbox is checked. A 'When to Apply' tab is selected, showing a list of conditions: 'The catalog UI policy is Active', 'The Items in the Conditions field evaluate to true', and 'The field specified in the catalog UI policy is present on the specified catalog item'. Below the conditions, there are buttons for 'Add Filter Condition' and 'Add "OR" Clause'. A condition is added: 'additional\_accessories' is 'true'. The 'Applies on a Catalog Item view' checkbox is checked. At the bottom, there is a blue button that says 'Apply the catalog UI policy actions when the form is loaded or when the user changes values on the form'.

8.Click on **save**.(do not click on submit)

9.Scroll down and select 'catalog ui action'

10.Then click on new button

11.Select variable name as: accessories\_details

Order:100

Mandatory: True

Visible : True

12.Click on save and again click save button of the catalog ui policy form

The screenshot shows the 'Catalog UI Policy Action - accessories\_details' configuration page in ServiceNow. The page includes a header with the ServiceNow logo and navigation tabs. The main content area has a blue informational box at the top explaining that UI policy actions specify exactly what actions to take on a specified field. Below this, there are fields for 'Catalog Item' (set to 'Laptop Request 3'), 'Variable name' (set to 'accessories\_details'), and 'Order' (set to '100'). To the right, there are several dropdown menus: 'Application' (set to 'Global'), 'Mandatory' (set to 'True'), 'Visible' (set to 'True'), 'Read only' (set to 'Leave alone'), 'Value action' (set to 'Leave alone'), and 'Field message type' (set to 'None'). At the bottom left, there are 'Update' and 'Delete' buttons. Below these buttons, there is a 'Related Links' section with a link to 'Run Point Scan'.

## d. Creation of ui action

1. Open service now.
2. Click on All >> search for ui action
3. Select ui actions under system definition
4. Click on new
5. Fill the following details to create ui action  
Table: shopping cart(sc\_cart)  
Order: 100  
Action name: Reset form  
Client : checked

Script:

```
function resetForm() {  
    g_form.clearForm(); // Clears all fields in the form  
    alert("The form has been reset.");  
}
```

Click on save

The screenshot shows the ServiceNow web interface for configuring a UI Action. The left sidebar shows a search for 'ui actions' with no results, and a list of results under 'System Definition' including 'UI Actions'. The main panel is titled 'UI Action - Reset Form 3' and contains the following configuration fields:

- Name: Reset Form 3
- Table: Shopping Cart [sc\_cart]
- Order: 100
- Action name: Reset Form
- Active: ☒
- Show insert: ☒
- Show update: ☒
- Client: ☒
- List v2 Compatible: ☒
- List v3 Compatible: ☐
- Overrides:
- Messages:
- Application: Global
- Form button: ☐
- Form context menu: ☐
- Form link: ☐
- Form style: -- None --
- List banner button: ☐
- List bottom button: ☐
- List context menu: ☐
- List choice: ☐
- List link: ☐
- List style: -- None --

Buttons for 'Update' and 'Delete' are visible at the top right of the configuration panel.

## e. Login to another Instance

Steps to Export changes to another instance:

1. Click on All >> search for update sets
2. Select local update set
3. Select created update set i.e. 'Laptop Request Project'
4. Set the state to 'Complete'
5. In the related list Update tab, updates are visible which we perform under this update set.
6. Click on export to XML ,it download one file

ServiceNow

Import XML

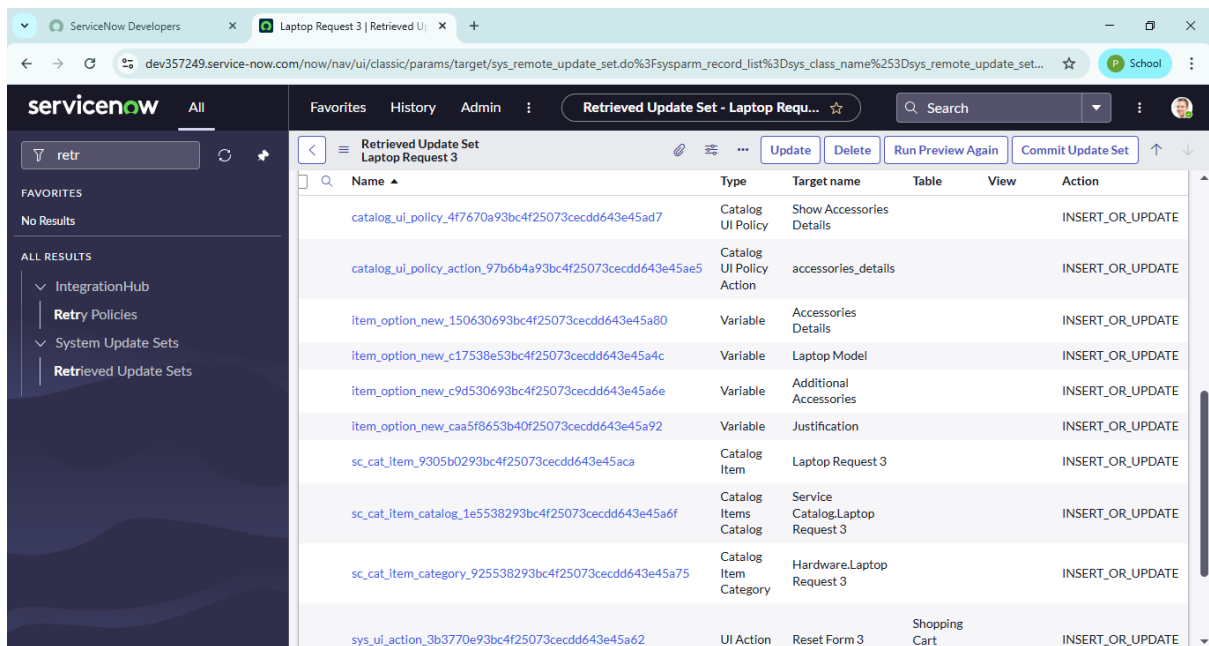

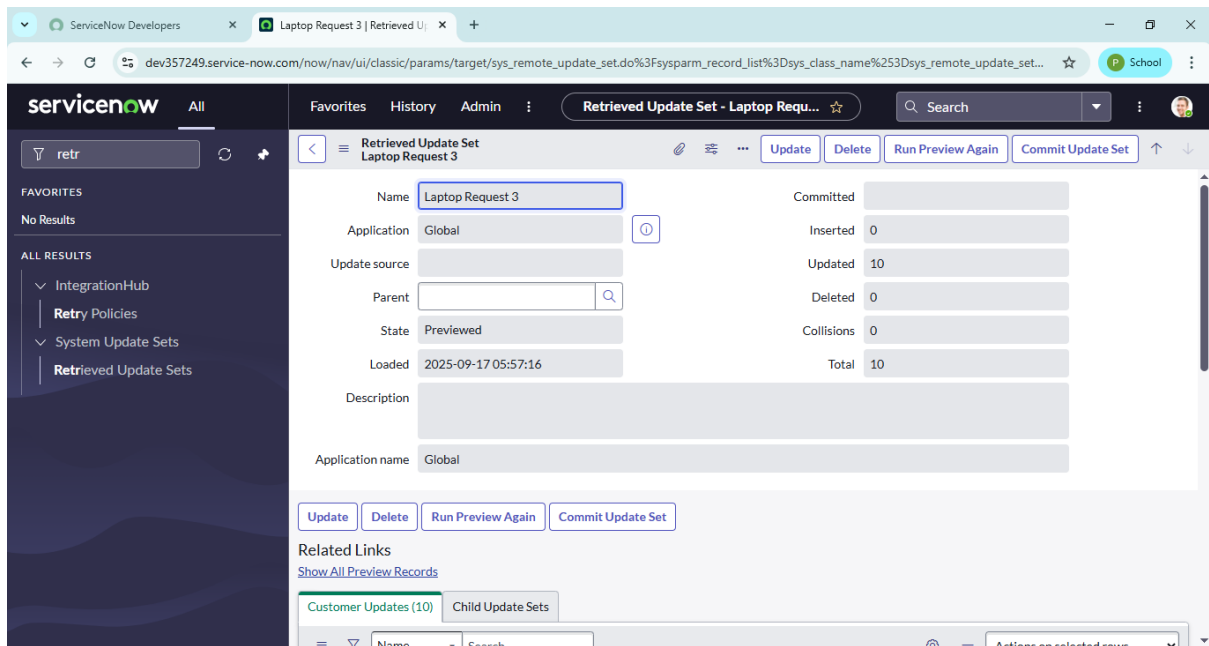

Importing records from an XML file will not run Business Rules

Step 1: Choose file to upload

\* XML file  sys\_remote\_u...43e45a51.xml

Step 2: Upload the file

9. Open retrieved update set 'laptop request project'
10. Click on preview update set
11. And click on commit update set
12. And also see the related tab updates
13. After committing update set in this instance we get all updates which are done in the previous instance.

## 6. Screenshots of Output:

After implementing the Maintain Item in ServiceNow and exporting xml file, test the catalog item.

- 1.Search for service catalog in application navigator in target instance
- 2.Select catalog under service catalog
- 3.Select hardware category and search for 'laptop request' item
- 4.Select laptop request item and open it
- 5.It shows three variables only

## 7. Conclusion:

The implementation of the **Laptop Request Catalog Item** in ServiceNow has streamlined the process of requesting laptops at ABC Corporation. By leveraging ServiceNow's Service Catalog capabilities, employees now have access to a dynamic, user-friendly, and guided request form that ensures accuracy and efficiency. This eliminates manual errors, reduces delays, and provides IT teams with the right information upfront to fulfill requests quickly.

With the setup of catalog variables, dynamic rules, workflows, notifications, and governance tracking, the request process is now:

- **Faster** – Employees can submit requests in minutes with guided forms.
- **Accurate** – Dynamic fields ensure complete and correct information.
- **Efficient** – Automated workflows streamline request handling for IT.
- **Employee-focused** – A modern interface improves satisfaction and request transparency.

In summary, this project demonstrates how ServiceNow can be used to replace manual, error-prone processes with automated, efficient, and employee-centric solutions. It not only improves IT service delivery but also enhances employee productivity by providing timely access to essential equipment.
